

Industrial and collective water heaters

Calorifiers and Combi water heaters

With coil exchanger

- A compact, safe solution for producing hot water from multiple energy sources, including solar energy.
- **Operation**
Semi-instantaneous hot water production tanks featuring an optimised coil that fully heats the tank and provides a stable temperature when water is drawn.
The tanks can operate from two sources of energy, primary fluid in the winter and electricity in the summer, for example.
- **Technical characteristics**
 - Securex mineral lining (anti-corrosion and anti-perforation)
 - Sanitary working pressure: 7 bars (testing pressure at 12 bars), primary service: 4 bars
 - Maintenance cover as standard (dia. 150)
 - M1, M0 flexible jacket or metal jacket with polyurethane foam insulation
 - Steel RST 235 tank
 - Bottom dome drain 50/60
- **Additional characteristics for the Se Combi water heaters**
 - Sheathed elbow heating element (Incoloy 800) to fully heat the tank (no lukewarm area at the bottom of the tank that could encourage bacterial growth)
 - Control thermostat with thermal cut-out safety device

Technical data

	Exchanger output (1) (kW)	Exchanger surface area (m ²)	Exchanger capacity (L)	Load loss (mBar)	Initial heat-up time (2) (hour)	Flow at 60°C (3)			Sheathed heating element output (kW)	Heat-up time (4) (hour)	Energy consumption in kWh/24h	
						1 st hour (L)	Continuous (L/h)	In 10 minutes (L)			Steel jacket	Flexible jacket
500 Se	43.5	1.06	7	50	1	1464	1064	726	-	-	3.7	7
500 Se Combi	43.5	1.06	7	50	1	1464	1064	726	5	6h30	3.7	7

(1) primary = 90°C, flow 2m³/h – secondary = C/W 10°C, H/W 45°C (2) from 10 to 60°C, primary = 90°C / 2m³/h (3) primary = 90°C, flow 2m³/h – storage at 65°C (4) from 15 to 65°C

Please consult us if you require other outputs.

Applications

- Hotels • Residential buildings • Gyms • Cafeterias • Hospitals • Barracks • Industries
- Any installation with large requirements for hot water

500 litres Se and Se Combi

Built-in exchanger

Tank-heater version

- 1 M26/34: Cold water inlet/hot water outlet
- 2 M26/34: Optional socket for loop-back connection
- 3 F26/34: Main circuit
- 4 M15/21: Socket for adapting a thermostat to control the main circulation pump
- 5 M26/34: Siphon draining

For combi water-heaters only

- 6 F15/21: Thermometer socket
- 7 F15/21: Adaptation socket for additional safety thermostat
- 8 Electric heating element

Coil exchanger

Calorifiers and Combi water heaters

Removable/removable mixed exchanger

- 750- to 3000-l range simple version with tubular exchanger and mixed version with tubular exchanger and sheathed heating element for full heating of the tank capacity.
- **Operation**
 - For the tank-heater version**, heating is provided all the year round by one source of energy: primary fluid.
 - For the combi water heater version**, water can be heated from 2 sources of energy (primary fluid and electricity). In winter, the exchanger heats the water from energy obtained from the primary source. In summer, water is heated by the electric heating element (the boiler is shut down).
- **Technical characteristics**
 - Removable exchanger with a set of AISI 304 stainless steel tubes
 - Securex mineral lining (anti-corrosion and anti-perforation)
 - Working pressure: 7 bars and testing pressure: 12 bars
 - In the primary pressure circuit: tubular exchanger: 10 bars, temperature: 100°C
 - Bottom dome drain 50/60
 - Thermometer connections for loop return and thermal cut-out adaptation
 - Maintenance cover thanks to the 150- or 200-mm diameter flange depending on the model
- **Additional characteristics for the combi water heaters**
 - Sheathed elbow heating element (Incoloy 800 type) for completely heating the water above 60°C
 - Control thermostat with thermal cut-out mechanism to be connected to a power switch (not supplied) for outputs greater than 5 kW.

Applications

- Hotels • Residential buildings • Gyms • Cafeterias • Hospitals • Barracks • Industries
- Any facility requiring large amounts of hot water

2500	24	6h45	12.3	9.6
3000	24	8h	14	11

* from 15 to 65°C

750 to 3000 litres with removable exchanger

- 1 Cold water inlet / hot water outlet
- 2 M33/42: Return loop tube
- 3 Primary circuit (tubular exchanger)
- 4 F40/49: Plug for exchanger control thermostat
- 5 M50/60: Drain
- 6 F15/21: Plug for thermometer
- 7 F15/21: Plug for additional safety thermostat
- 8 Electric heating element

Tubular exchanger

Stainless steel tubular exchanger fitted on to dia. 210 flange (water primary or steam 0.5 bars)

Turbot (plate exchanger)

Simple, compact and effective

We have designed specific appliances to provide the continuous production of large quantities of hot water.

Installed alongside a gas or fuel oil boiler, an energy recuperator or heat pump, they operate semi-instantaneously by means of a plate exchanger.

The storage tank thus absorbs peaks in consumption by reducing the output of the primary energy source to be installed.

Operation

Semi-instantaneous production of hot water by means of a plate exchanger.

Provides continuous production of hot water.

Storage tank that absorbs peaks in consumption by reducing the power of the primary energy source to be installed.

● Technical characteristics

- Steel RST 235 tank
- Securex mineral lining (anti-corrosion and anti-perforation)
- Working pressure: 7 bars and testing pressure: 12 bars (primary: 10 bars max., temperature: 140°C)
- AISI 316 stainless steel, brazed plate exchanger
- Bottom dome drain 50/60 (optional for 300 and 500 l)
- Control bulb aquastat that controls the circulator pump (not supplied) of the primary circuit
- Manual reset bulb thermal safety mechanism to prevent overheating if the aquastat fails
- Secondary circulation pump
- 3 isolating valves for maintenance and for changing the exchanger or the pump
- Storage temperature thermometer
- Maintenance cover thanks to the 150- or 200-mm diameter flange depending on the model
- Connection for loop return.

Applications

- Hotels from 8 to 130 rooms • Residential units from 8 to 160 apartments • Hospitals, etc.
